Mines and Mining Stocks

SAYS JARBIDGE IS COMING BIG CAMP

With Results of His Work.

day to get assay returns from the first lot of samples taken from the several was bid up to 79c, when the offerings lot of samples taken from the several came with sufficient regularity to force groups of claims which he located in the new camp. With the returns received by him Mr. Greenwalt was well came with sufficient regularity to force it down to 75c. Even the low price of the day is something of a gain over recent quotations, however. Columbus Conceived by him Mr. Greenwalt was well

Owing to the fact that the first pros-Owing to the fact that the miss pectors in the camp, with no facilities pectors in the camp, were in the 32c, Uncle Sam was firm at 47c to 474c dark as to just what kinds of rock carry the values, some samples were taken which showed no values. But of the rock containing metal there appears to be two grades, as shown by the following objective assay reat hand for testing ores, were in the the following characteristic assay returns: Gold, \$739.60; silver, 8.2 ounces. Gold, \$897.60; silver, six ounces. Gold, \$49.60; silver, 94.5 ounces. Gold, \$56.80; Beck Tunnel Big Hill 64.9 ounces.

why prospectors so long overlooked the newly discovered district—that the values are not disseminated in the councillation of the case in many Netry rock, as is the case in many Nevada gold camps; deposition of minerals has been confined to the shoots within the veins.

The formation in a general way, Mr. Greenwalt says, comprises a system of rhyolite dikes, which are cut by veins which have a northerly and southerly trend, Enrichment occurs in ore shoots at the intersections of the veins with the dikes. The veins are well defined. The shoots are of generous width; they are possibly not of great length, all led Gold though not enough work has been done to admit of a definite statement being made regarding that feature. The formade regarding that feature. The lormation is ideal for a permanent camp, and the discovery that the ores are of the petsite form of tellurium is a little Bell ... Little Bell ... Little Chief strong additional indication of their

Not Confined to One Strike.

The district is about five miles long by two miles wide. The original discovery, which attracted so much attention, is one of the absolute of the about five miles long Mt. Lake Ex. Mt. Lake Ex. tion, is one of the rhyolite dikes, by McKihley . erosion of the second flow of rhyolite, Nev. British has been left standing with its top some fifty feet above the surface of the surrounding country. The high values are found in a succession of ore shoots of ore shoots. formed along the like at intersections Opohongo .
Pioche Met. of the veins which cut it.

Mr. Greenwalt located one group of claims, the Bunker Hill and Sullivan, the surface showing of which, experts tell him, is fully as good as is that of the Bourne property. Another group located by him—the Jarbidge—looked so good to W. A. Stevens, a San Francisco mining engineer, that he took a capitalists whom he represents. Several other good show-mes have been made.

represents. Several other good showmas have been made.

Mr. Creenwalt has no doubt that the district has the greatest future of any that has been discovered since Cripple Creek was brought in. He believes that it offers great opportunities to experienced prospectors. He expects to return to the camp in four or five days, despite the snow. To one who is despite the snow. To one who is equipped for it no insurmountable difficulties are in the way of winter operations there, he avers.

OPEX IS AGAIN ACTIVE AND CLOSES HIGHER

Renewed activity in Opex was displayed yesterday, with sales of 1,000 shares at 32½c to 3lc, while at the close 1,300 shares changed hands at 34½c. McDonald Ely was strong, with 500 shares bringing 40c. Sales of other unlisted stocks: Utah Mine, 200 at 95c; Mammoth, 800 at \$1; Federal Ely, 2,000 at 13½c, buyer days.

COAL GREAT NEED

Mines May Have to Reduce Production.

Consolidated Mercur and Sunshine Mining companies, at Mercur, were yesterday threatened with enforced reduction of output on account of the in-ability of the railroad company to de-liver coal at the mines. The two mining companies have twenty carloads of coal in transit from Rock Springs, all of the cars having reached points between Ogden and Mercur, and all of them have apparently been laid out by The supply of coal at Mercur was yesterday about what would last through the day, so that unless one of the delayed cars was pulled in last night the closed down. In such event only the oxidized ores can be treated.

tional trouble on account of the freezing of water in pipes and tanks-a result of the continued cold weather. With the ordinary cold snap of a day or two, followed by thawing temperature, no difficulty is experienced from this source; the present cold spell has been unusual in the length of time freezing temperature has been main-

Ore at Samplers. Ore receipts, by carloads, reported yesterday by the Utah Ore Sampling company: Utah; 8; Nevada, 1.

SEES GOOD MINES

Consolidated and Sunshine Those of Tonopah, Goldfield, Round Mountain and Good Springs Worthy.

> While the mining camps of southern Nevada are quiet so far as the operating of small properties is concerned, the big mines of Goldfield and Tonopah -Goldfield Consolidated and Tonopah Mining-are making remarkable records, according to Harry S. Joseph, who has just returned to the city after having made a tour of a number of the districts to look after the performing of annual work upon properties in which he is interested.

"The ore body in the Clermont shaft of the Goldfield Consolidated is a pipe layed cars was pulled in last night the roasters in the mills will have to be closed down. In such event only the ore shoot. Picture values of almost The Mercur mines are having addi- any size desired may be obtained from it, and I was told that the average is something like \$200 a ton.

"Production from it is limited to the tonnage required to 'sweeten' the ore which is sent to the mill. It appears to be an easy matter to run up the mill average. The policy is to keep that average close to \$30 a ton, and I saw the returns for twenty days, which showed an average of \$35.60 a ton.

"The bulk of the tonnage sent to the mill runs between \$10 and \$20 a ton. the mill is treating 700 tons a day, with the tonnage made up in proportions required from the Mohawk, Redtop and Combination Fraction workings. With Chilean mills installed it is expected to increase the tonnage to 900 tons a The Florence mine is likewise doing well.

Extends Tonopah Ore Zone.

"Tonopah Mining is not only making an excellent record in the matter of production and the paying of dividends, but it is rapidly pushing its proven ore zone toward the southeast. A great deal of good work is being done in the

"The Round Mountain Mining company, which is one of the most promising young dividend-payers in Nevada, is absorbing all of the properties with good showings in its vicinity, including the Red Top, Combination and Sphinx. The combined properties will undoubtedly be developed into one of the great gold mines of the west."

Mr. Joseph was much impressed by the showing in the zinc mines of Good Springs. Several of the mines are shipng, others are preparing for producion, while the Kent propery was re-ently placed under bond for \$800,000, arge bodies of exceptionally pure nc ore are being developed in differt properties, with the promise of pro action at relatively low cost.

atching Fissure on 300-Foot Level Relieves Suspense of Management.

Encountering the vein on the 300-foot evel, where is a showing of quartz aprently as good as that above, has reelived almost to a certainty the prospect making a paying mine in the property the Musgrove Mining company, near almon City, Ida. The company is concled by A. H. Brown and associates of

his city.

Development of the Musgrove mine was ntil recently confined to the 150-foot evel and above. There was opened 120 eet on its strike an ore shoot three feet nick which shows average values in gold nd silver close to \$20 a ton, returns from he rigid sampling of the entire body having been a little below that figure, while mother gave returns above \$20. ng been a little below that figure, while nother gave returns above \$21.
The lower tunnel, on what is called the been considered by level, was driven some distance on fissure which was believed to be the nain vein, but ore was not encountered where it should have been found. Reently Mr. Brown made a survey, when his measurements showed that the main issure should be 54 feet east of the one on which the tunnel was driven. A crossut was run over and the vein, carrying the looked-for ore, was encountered in e looked-for ore, was encountered in st 54 feet. With drifting on the 300 level proving up se ore shoot as anticipated, arrangents for building a mill on the ground ill be made.

YE PATCH OLD WINZE SHOWS GOOD VALUES

The lower tunnel in the property of the Rye Patch Consolidated Mining company should have only from eight feet to possibly 15 feet further to run to enter the Silver Bell fissure is the report brought from camp by W. A. Ray. When the tunnel reaches the fissure it will be not far from the Borland stope, where was an immrense chamber of high-grade ore, mined in the early days to a level about 80 feet above the lower tunnel. Experts who recently examined the mine found in an old tunnel, some distance back from the face of the new tunnel and on the Silver Bell fissure, five feet of clean ore which returned values of \$45 a ton. The tunnel has for some distance been following a good fissure which evidently leads to the main vein, the ore it carries running \$9 to \$15 a ton. running \$9 to \$15 a ton.

SOUTH UTAH MINES IS LISTED ON CURB

TO LOCAL EXCHANGE

The application of E. W. Hulse & Co. for membership in the Salt Lake Stock & Mining exchange was yesterday acted upon favorably by the membership committee of the exchange. The company, which is one of the prominent brokerage firms of Ely, bought the seat of T. R. Kelly, on the local exchange, and is opening an office in the Shubert theatre building. The company will continue in business in Ely and will also, it is said, open an office in New York city.

Cash Your Judgments

Thousands of judgments are neglectedforgotten and become outlawed because clients do not understand that judgments do not collect themselves. Any lawyer can sue and obtain a judgment, but it is another story to collect it. There is as much science in the collection of a claim in judgment as in the collection of a claim not in judgment. We have not less than 15,000 cases in the different courts at all times. We have the machinery to carry these cases into execution and cash them. We are continually devising new plans and methods. If you have a judgment you would like to cash, write or see us. We collect everywhere throughout the civilized world. Red Streaks of Honesty Exist in Everybody. Good crops can be raised on barren ground if you know
